```
CC comprising administering a positive or negative regulator of cell-death CC inhibitory-factor. The invention also comprises a method for screening CC modulators of cell-death, by contacting cells expressing cell-death CC inhibitory factor with a candidate compound, monitoring level of CC expression of cell-death inhibitory factor, evaluating cell-death CC modulation ability of the compound based on change in the level of CC expression of the factor and selecting compounds having cell-death CC modulation ability. The cell death regulator of the invention may have CC cardiant, neuroprotective, anti-HIV, antifilammatory, cerebroprotective, CC mepatotropic, cytostatic, immunosuppressive, antificementic, compounds control and compounds control of the invention is useful for treating CC hypotensive, antiarteriosclerotic, hamostatic, antialcoholic and CC virucide activities. The method of the invention is useful for treating CC HIV, cardiac diseases, immunological diseases, neurodegenerative disease, control disorder, acute pancreatic inflammation, and cancer, AIDS, control disorder, acute pancreatic inflammation, and cancer, AIDS, cutolimune diseases, rheumatism, Crohn's diseases, splaucoma, Alzheimer's disease, Parkinson's disease, Huntington's disease, hypertension, cerebral control inflammation, cerebral infarction, cerebral haemorrhage, hepatitis, alcoholic hepatitis, and cerebral ischemia. The present sequence represents the DNA control in the compound control of the compound cerebral control death inhibitory protein of the compound control of the compound cerebral cell death inhibitory protein of the compound cerebral cell death inhibitory protein of the compound cerebral cell death inhibitory protein of the compound cerebral cell death inhibitory protein of the cerebral cell death inhibitory protein of the cerebral cell death inhibitory protein of the cerebral cell death inhibitory protein of the cell death inhibitory protein of the cell death inhibitory protein of the cell death inhibitory protein of the ce

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, such as alzheimer's, Parkinson's disease, Huntington's disease, such as alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel

immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alaheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification

Novel isolated nucleic l for treating or acids comprising sequences diagnosing e.g. cancer. encoding peptides

1; Page 825-826; 2352pp; English.

include: cytostatic; proliferative; vulnerary; immunomodulator; anticlude: cytostatic; proliferative; vulnerary; immunomodulator; anticlude: cytostatic; antiasthmatic; antiarthritic; antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral; antininflammatory; antithyroid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in Example of activities to AAC78448 encode the human cancer associated proteins given to AAB44239. The proteins can have activities based on the ij

                                                                                                                                                                                                                                                                                                                                                                                             CC AAS06701-AAS06757 encode for novel human protein kinases #1-57. The novel CC protein kinases have been identified as members of the tyrosine or CC serine/threonine kinase (PTK and STK) families. The polynucleotides CC encoding protein kinases and the polypeptides may be used in the CC inappropriate kinases and treatment of diseases associated with CC cancers (especially cancers of haematopoietic origin), cardiovascular CC immune related diseases (e.g. theumatolic disorders (e.g. diabetes), CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. theumatory disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. theumatory disorders (e.g. asthma), infectious CC disease (e.g. HIV) and reproductive disorders (e.g. infertility). CC Additionally, polynucleotides encoding protein kinases may be used for colypeptides may be used as antigens in the production of antibodies colypeptides may be used as antigens in the production of antibodies of profession kinases and in assays to identify modulators of profession and areas areas and in assays to identify modulators of

The kinase polynuclectides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides may also be used for preparation of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein by immunoaffinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Kinase activity; molecular weight marker; isoelectric focusing marker; peptide fragmentation control; cellular signal transduction; ss.

                                                                                                                                                                                                                                                                                                                         The invention provides an isolated human tribbles homologue-1 (htrb-1, CC also known as stress kinase inhibitor protein (SKIP-1)) polypeptide. The chris polypeptide is useful for inhibiting an AP-1 mediated inflammatory (CC signal in a cell. The polypeptide employed in the method is preferably (CC htrb-1, htrb-1 N htrb-1 C, htrb-1 N C, htrb-3, htrb-3 N htrb-3 C, or htrb (CC -3 N C. It is also useful for providing htrb agonist activity for cativating an ERK-mediated signal e.g. AP-1-mediated gene activation (CC fibroblast growth factor (FGF) induced signal, or a PMA induced signal, an estroyen receptor-mediated gene activation signal, an induced signal e.g. AP-1-mediated gene activation (CC in a cell. Htrb modulators are useful for modulating AP-1 mediated (CC inflammatory signal in a cell such as tumor necrosis factor (TNF) induced (CC inflammatory signal in a cell such as tumor necrosis factor (TNF) induced (CC inflammatory signal in screening assays, predictive medicine and in (CC therapeutics or prophylactics. The htrb proteins are useful for screening compounds e.g. for treating and/or preventing diseases caused by abnormal (CC thrb-activity, such as rheumatoid arthritis, diabetes, psoriasis, costeoporosis, diabetic retinopathy, myocardial infarction and cancers. (CC The htrb therapeutics are useful for antagonizing interleukin-1 dependent (CC matter damage and subsequent cerebral palsy; and inflammation or (CC cutolimmune disorders. The present sequence represents a DNA encoding the other providers.)
                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                    PKIN. The PKIN polypeptides can be expressed using standard recombinant methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a cDNA encoding a human PKIN-10 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the comprises preparing a gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, predicting hepatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced conferential expression, are useful in identifying toxicity markers in considered that the procession and toxicity assays. Note: The sequence data for this patent did not form part of the printed to the printed that the printed the constant of the printed that the printed the constant of the printed that the printed the printed that the printed the constant of the printed that the printed the printed that the printed the printed that the printed that the printed the printed that th

Elashoff
                  Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox mean values.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            toxic effect; gene expression profile; hep-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 2004 BP; 410 A; 563 C; 590 G; 441 T; 0 U; 0 Other;

The method of the invention is useful for treating HIV, cardiac diseases, immunological diseases, neurodegenerative disease, ischaemic damage and congestion, disorder of central nervous system, hepatic disorder, acute pancreatic inflammation, and cancer, AlDS, autoimmune diseases, rheumatism, Crohn's diseases, glaucoma, Alzheimer's disease, Parkinson's disease, Huntington's disease, hypertension, arteriosclerosis, reperfusion damage, myocardial infarction, cerebral trauma, cerebral infarction, cerebral haemorrhage, hepatitis, alcoholic hepatitis, and cerebral ischemia. The present sequence represents the DNA sequence encoding the rat cell death inhibitory protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  comprising administering a positive or negative regulator of cell-death inhibitory-factor. The invention also comprises a method for screening modulators of cell-death, by contacting cells expressing cell-death inhibitory factor with a candidate compound, monitoring level of expression of cell-death inhibitory factor, evaluating cell-death modulation ability of the compound based on change in the level of expression of the factor and selecting compounds having cell-death modulation ability. The cell death regulator of the invention may have cardiant, neuroprotective, anti-HIV, antiinflammatory, cerebroprotective, hepatotropic, cytostatic, immunosuppressive, antitheumatic, ophthalmological, nootropic, antiparkinsonia, anticonvulsant, hypotensive, anti-arterioscopic, antiparkinsonia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2004 BP; 410 A; 563 C; 590 G; 441 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Controlling cell-death by administering positive or negative regulator cell-death inhibitory-factor, for treating cancer, AIDS, autoimmune diseases, Crohn's diseases, glaucoma, Alzheimer disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method for controlling cell-death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 2; 35pp; Japanese

DNA encoding novel human diagnostic protein #27035

13-FEB-2002

(first entry)

supplement; n mapping; gene mapping; gene therapy; forensic; medical imaging; diagnostic; genetic disorder; forensic;

Homo sapiens

WO200175067-A2

30-MAR-2001; 2001WO-US008631.

```
CC sequences. (I) is useful as hybridisation probes, polymerase chain and in recombinant production of (II). The polymucleotides are also used CC in diagnostics as expressed sequence tags for identifying expressed activity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal CC contivity of (II) and its binding partners are useful in medical imaging CC supplement. (II) and its binding partners are useful in medical imaging CC supplement (II) and its binding partners are useful in medical imaging CC supplement protein expression or biological activity. The CC polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197 AAS94564 represent novel human diagnostic CC coding sequences of the invention. Note: The sequence data for this code patent did not appear in the printed specification, but was obtained in CC electronic format directly from WIPO at CC fit, wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
